

Mechanical engineer for Miitors

Miitors is looking for a talented mechanical engineer.

We are seeking a skilled engineer that in addition to help launching our smartest water meter to full scale production also wishes to participate in developing our next market leading products for mass production.

We work and live as a start-up company and in addition we have a strong organization behind us, so you will see your best ideas brought to reality very fast.

You are a bright Bachelor, Master or PhD that is willing to exert yourself and learn a lot. Most important is your **stamina**, **passion** and **willpower** that we need in order to bring life to grand visions from yourself and our team

Previous work with development using **SolidWorks** is expected, but if you have combined this with experience in some other fields such as **tooling**, **injection molding**, **volume production**, **fast prototyping**, **supply chain management** or maybe even some of **ultrasound**, **fluid dynamics** or **type approval**, then we would start getting very interested in you.

All engineers in our company work as one team, regardless of their individual skills and areas of knowledge, so hopefully you appreciate many different kinds of challenges.

For further information or application, please contact CEO Jens Drachmann:
j.drachmann@miitors.com.

Miitors is a young R&D company that has developed the smartest electronic water meter in the world – W-Miitor. It is very sensitive – is very low cost – has no moving parts – communicates – and it has the lowest power consumption.

Miitors is owned by Apator Powogaz, one of the largest water meter manufacturers in Europe
